

## Fulvic Acid Additive

# Ergro Soil L-40

### Improves Nutrient and Fertilizer Assimilation for Better Metabolic Growth

**Ergro Soil L-40** stands out as a potent foliar solution with a remarkable 40% concentration of organically derived fulvic acid. This high dose product plays a crucial role in enhancing soil health and productivity. By fostering microbiological activity within the soil, **Ergro Soil L-40** effectively breaks down challenging soil types like clay and bolsters soil structure. Microflora feed off of fulvic acid which aids in the aeration of the soil, enhances water retention, and unlocks nutrients previously inaccessible to plants. This enables easier assimilation of nutrients by plants, thereby promoting their growth and vitality.

### Benefits

- Increases the microbiological activity in the soil
- Used as a chelating agent to improve performance of herbicides, fungicides and insecticides.
- Maximizes the full genetic expression of the plant
- Improves the availability and uptake of soil nutrients
- Promotes seed germination
- Enhances flowering, fructification and overall plant quality and crop yield
- Gathers minerals and increases air in soil allowing for better assimilation and root development

**Ergro Soil L-40** serves to stabilize soil structure, leading to improved soil conditions and fostering robust root development. Its capacity to form organic complexes with herbicides, fungicides, and insecticides strengthens their efficacy and extends their reach. This synergistic action not only enhances the efficiency of agricultural inputs but also contributes to overall health and yield.
