

## Additive

# Ergro® Kel Calcium 10% Ca

## 10% Calcium Chelated with Fulvic Acid and Micronutrients

**Kel Calcium** is a specialized foliar product formulated with essential micronutrients chelated using EDTA and fulvic acid. This unique chelation process ensures the elements remain in a soluble and non-ionized form, maximizing their absorption by plants. By maintaining these nutrients in an accessible state, **Ergro Kel Calcium** facilitates their efficient assimilation by plants, leading to enhanced growth and development.

Primarily utilized for correcting nutrient deficiencies, **Ergro Kel Calcium** also plays a crucial role in chelating and transporting essential elements within plants. Its chelation properties enable the binding of micronutrients, preventing them from becoming inactive or unavailable to plants. This ensures a steady supply of nutrients, promoting healthy plant growth and vitality. **Ergro Kel Calcium** serves as a vital tool in plant management, ensuring optimal nutrient uptake and utilization for improved plant yield and quality.

## Benefits

- Corrects nutrient deficiency
- Assists in the transport of elements through chelation
