

## Growing, Flowering and Maturity

# Ergro® Crop

### Assists Plants Withstand Adverse and Stress Conditions

**Ergro Crop** stands out as an exceptional foliar spray for plants, developed through an innovative proprietary technological process. Enriched with potent fulvic acids and a blend of recognized plant nutrients, this formulation is indispensable for optimal vegetal nutrition. Functioning as a biological growth promoter, **Ergro Crop** excels in chelating and transport processes, ensuring the maximum expression of physiological and genetic potential in plants.

### Benefits

- Promotes harmonic plant development from growth stages through harvest
- Activates plant physiology, including the plants own hormones
- Promotes hormone balance within plant, stimulating ordered flower and fruit formation
- Impacts floral differentiation, pollination and fruit formation, reducing abortion and deformation
- Harmonizes plant metabolism, generating synergism with nutrients
- 100% water soluble

### Mode of Action

- Promotes natural development of the hormones within the plant, facilitating its metabolic functions
- Generates increased cellular activity, enabling development and growth in the plant
- Fulvic acids make nutrients readily assimilated by the plant
- Can be absorbed via plants' foliage (stems, leaves, flowers and fruits)
- When used in soil applications, it can be absorbed by the roots for efficient nutrient uptake
