Ergro® Set 20G 5-1-0

Slow-Release Granular Root Enhancer Containing 20 Nutrients and Minerals

Ergro Set 20G is a slow-release granular root enhancer designed to optimize the initial fertilization program for all plants. Highly effective in stimulating and promoting plant growth, it contains Nitrogen, Phosphorus, essential micronutrients, as well as valuable humic and fulvic acids — considered the best organic matter available. This additive is designed to be applied as a mixture with granular soil fertilizers, ensuring comprehensive and balanced nutrition for plant development.

Benefits

- Activation of the soil's fertilizers and improvement of assimilation
- Increases microflora
- Promotes root formation
- Excellent plant aerial development
- Promotes more vigorous plants
- Increases quality and crop yield

Mode of Action

- As nutrients (native and added) become available for assimilation, **Ergro Set 20G** helps plants absorb them
- Available at the rhizosphere, allowing nutrient uptake through plant and foliar areas
- The content of fulvic acids facilitate a quick response within the plants
- Acidic pH helps avoid pathogenic organisms at root level
- Works well in acidic and alkaline soils
- Improves effectiveness of insecticides and fungicides

Note: When mixed with urea, apply immediately. Do not store the mixture of Hydro Ergro Set 20G with urea, as this mixture is very hygroscopic. If used with capsuled or slow-release urea, there is no reaction.
